Windows für mehrere RDP-Sitzungen konfigurieren

+++++

<https://github.com/asmtron/rdpwrap/blob/master/binary-download.md>

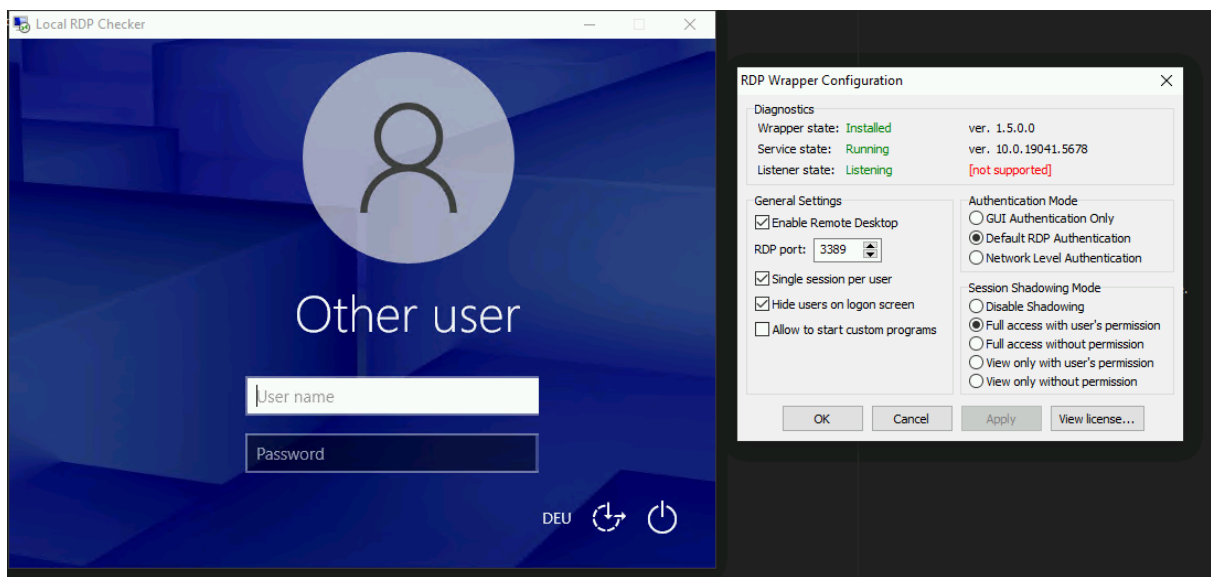

+++++

Um Versionen von Windows Professional ab 7 als Terminalserver benutzen zu können wie folgt vorgehen:

1. Benutzer anlegen (am besten über lusrmgr.msc)
2. Remotedesktopdienste am Server aktivieren
 - a. Sysdm.cpl → Remote
 - b. Allow remote connections to this computer → check
 - c. Select users → Benutzer für den Zugriff auswählen
3. RDPWrap installieren
 - a. RDPWrap-vX.X.X.zip herunterladen und irgendwo auf C: extrahieren
 - b. install.bat ausführen
 - c. Mit RDPCnf.exe kann man noch Einstellungen vornehmen - Windows 7 Benutzer sind an der Stelle fertig.
 - d. Windows 10 Benutzer müssen noch in C:\Program Files\RDP Wrapper die rdpwrap.ini ersetzen.

4. Mit RDPCheck.exe im .zip Ordner kann man nun prüfen, ob mehrere Benutzer gleichzeitig arbeiten können. Ist dies noch nicht der Fall, muss evtl. mit gpedit.msc unter "Local Computer Policy/Administrative Templates/Windows Components/Remote Desktop Services/Remote Desktop Session Host/Connections/Limit number of connections" die Richtlinie aktiviert werden und ein entsprechender Wert eingetragen werden.

Das sollte es gewesen sein.

▼ rdpwrap.ini
